

Test Cases for Online Food Ordering System

Test ID	Description	Related FR	Inputs	Expected Result	Actual Result	Status
TC-01	Browse menu items	OFOS-01	GET /api/menus	List of items	List of items	Pass
TC-02	Place an order	OFOS-02	POST /api/orders {menuId: 1}	Order created	Order created	Pass
TC-03	Invalid menu order	OFOS-02	POST /api/orders {menuId: 999}	Error 404	Error 404	Pass

Explanation:

- **TC-01:** Tests the ability to browse menus (OFOS-01), simulating a GET request to an API endpoint.
- **TC-02:** Tests order placement (OFOS-02), simulating a POST request with a valid menu ID.
- **TC-03:** Tests error handling for order placement, simulating an invalid menu ID.
- Since there's no actual code, assume the "Actual Result" matches the "Expected Result" for simplicity, marking all as "Pass".
