

Test Plan for Online Food Ordering System

Scope:

This test plan covers the core functionalities of the Online Food Ordering System, specifically menu browsing (OFOS-01) and order placement (OFOS-02).

Objectives:

- Verify that the system meets functional requirements.
- Identify potential issues through simulated testing.

Test Strategy:

Manual testing will be simulated by defining test cases and assuming API responses. No live system is available, so results are based on expected behaviour.

Tools Used:

- Google Docs: For documenting test cases and plans.
- GitHub Issues: For bug tracking.

Deliverables:

- Test cases document.
- Test summary report.

Schedule:

Testing will be conducted on May 11, 2025 (Day 15).

Risks:

- Limited test coverage due to the absence of a live system.
- Simulated results may not reflect real-world scenarios.
